

# logan

The Logan bench combines a design that is frugal and highly resistant to vandalism and the natural elements. Its rounded shape and lack of a backrest allows for versatility when determining its location.

The Logan is made of one single sheet of 4.75 mm thick steel and is often used in open spaces with a high degree of traffic. The Logan with cold rolled carbon steel has minimal maintenance requirements and the stainless steel version eliminates virtually all maintenance issues.

An element of urban furniture combining design, durability and functionality is the top choice for the architectural community.
